

**COMMUNICATIONS SYSTEM WITH INTERFACE FOR
ENABLING COMMUNICATION OF ALERTS TO MOBILE
WIRELESS COMMUNICATIONS DEVICES**

Abstract of the Disclosure

An interface device, method and computer-readable program includes a proxy operative as an agent for communicating with a plurality of mobile wireless devices using different operating protocols. A device information module is operative with the proxy and determines functional features of a wireless mobile communications device and selects a configuration file for configuring the proxy to interface with the device and enable communications of any desired alerts.
